

# JOYFIL®

Support your smooth and active daily life

Product made according to Thanks Ai's original formula

## Features of JOYFIL "3 secrets"

### 1 What kind of supplement is "JOYFIL"?

The most remarkable feature of JOYFIL is the blended "Undenatured Type II collagen" that helps deliver "Type II collagen", a main component of cartilage, in a natural manner. We produce our original formula JOYFIL by paying special attention to the precious natural ingredients extracted from the nasal cartilage of natural salmon caught in the sea of Hokkaido.

### 2 Why do we pay special attention to "Undenatured" Type II collagen?

Type II collagen, which comprises about 40-45% (not including water) of the cartilage's structure, loses its original function if it denatures due to effect of heat and acid. Accordingly, Thanks Ai pays special attention to the quality of the "Undenatured type II collagen" and its purity.

### 3 Why is JOYFIL in the form of a thin "film sheet"?

JOYFIL is made in the form of a thin film sheet which you can take without water, so that you can take it easily anywhere, anytime.

JOYFIL is easy to take even if you are not good at taking pills. As each sheet of JOYFIL is individually packaged, you can carry it conveniently when you go out or away from home on a trip.
